

WHERE **IRON AGE** ARE MADE

BATEMAN M'FG CO.,

GRENLOCH, New Jersey, U. S. A.

ESTABLISHED 1888

Tools are carried in stock at centers of distribution. Liberal stocks of suitable tools for each vicinity are carried by the best class of implement and hardware dealers in the country.

If not handled by your local dealer, write us for nearest address where tools can be seen and explained.

The greatest satisfaction comes from getting all of the crop
You need a good rake

It's what you save that counts

The Profit from

A fine seeding, a first-class stand,
a good growing year, may easily
be turned into loss unless you have

A Standard Reliable Rake

that will save all of your increase
and not spoil part of your crop

IRON AGE (Genuine New York Champion) Wood Hay Rake

Especially suited to stand rough work on the rolling land of eastern territory—more so than the all-steel rakes which were so popular at one time.

The record of forty odd years behind this rake is worth remembering. Originated by Wm. H. Patten and made by Patten & Stafford at Canastota, N. Y., as a specialty, they came to be regarded as the standard in their line—the reliable rake—always ready when needed—always up-to-date or ahead of its time.

Light, strong, compact, well put together, convenient, draws evenly, cleans the ground, gets all the hay that any rake can get.

The trade, dealer and consumer think very highly of this rake, especially in the North Atlantic and New England States, and no farmer is ever disappointed—he has an honest affection for this machine.

The sole right to manufacture is ours by purchase in 1908—and we make the genuine, in every respect.

Two styles are made—No. 1, Fig. 270, has complete wood axle; No. 2, Fig. 272, is same as No. 1, except has wood axle, reinforced by angle steel.

Sizes and Prices

STYLE	WEIGHT	EQUIPMENT	PRICE
No. 1820	299	8 foot 20 T., wood axle	\$25.00
No. 1826	310	8 foot 26 T., wood axle	26.00
No. 1922	314	9 foot 22 T., wood axle	26.00
No. 1927	324	9 foot 27 T., wood axle	27.00
No. 1024	326	10 foot 24 T., wood axle	27.00
No. 1031	333	10 foot 31 T., wood axle	28.00
No. 2820	315	8 foot 20 T., wood and steel	25.00
No. 2826	326	8 foot 26 T., wood and steel	26.00
No. 2922	334	9 foot 22 T., wood and steel	26.00
No. 2927	344	9 foot 27 T., wood and steel	27.00
No. 2024	347	10 foot 24 T., wood and steel	27.00
No. 2031	354	10 foot 31 T., wood and steel	28.00
Fig. 271		Parts to change thills to combination pole	1.00

If wanted with combination pole and thills (Fig. 271) add letter "C" to the number and \$1.00 to the price. If with steel wheels add letter "S" to the number.

Non-Rusting, Rakes Clean

W. TISBURY, MASS. The New York Champion Wood Rake has been a great favorite in this section not only on account of its perfect mechanism, but also on account of its non-rusting qualities, as we use them here on our salt marshes. The teeth do not catch trash, but rake the hay clean and the dumping and cleaning devices are excellent.

JOHNSON WHITING.

16 Years and Not a Tooth Broken

HAGAMAN, N. Y. The "Iron Age" (New York Champion) Hay Rake gives perfect satisfaction in every respect. It is of very light draft, raking clean, with apparently no wear whatever on dumping devices. They are durable—have used them for 16 years and have never broken a tooth.

WILLIAM F. SCHWEEM.

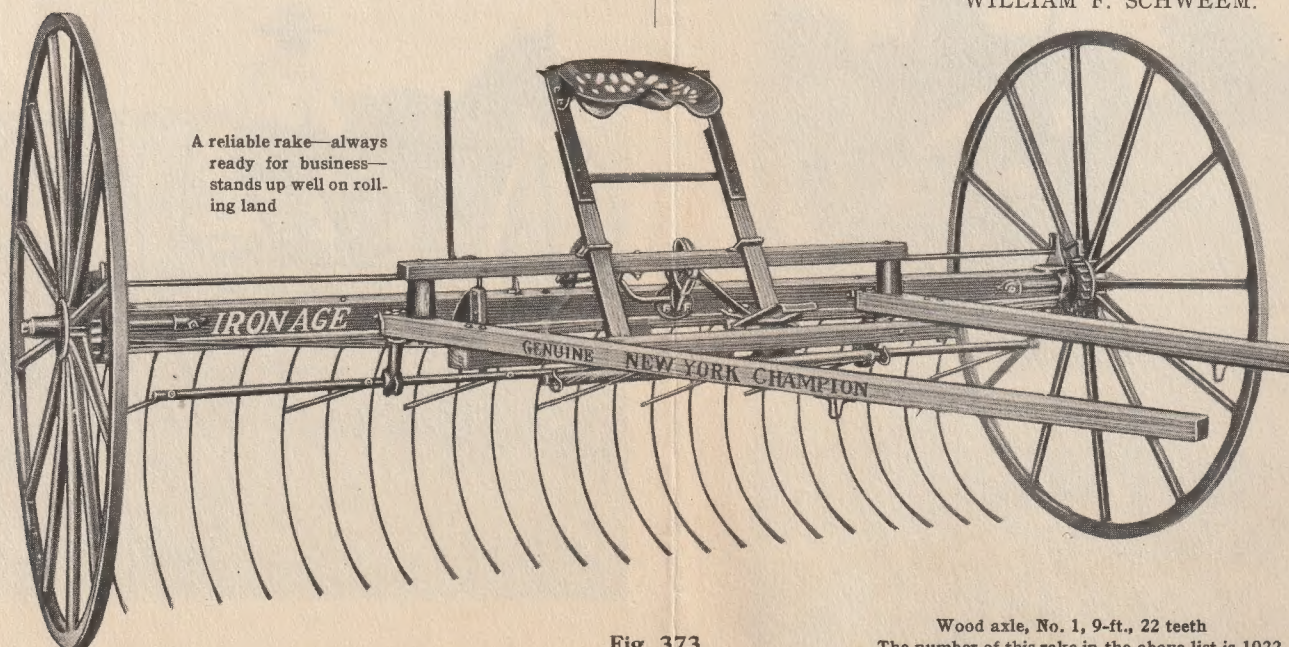

Fig. 373

Wood axle, No. 1, 9-ft., 22 teeth
The number of this rake in the above list is 1922

IRON AGE (Genuine New York Champion) Wood Hay Rake

Rakes clean.
Teeth lift high.

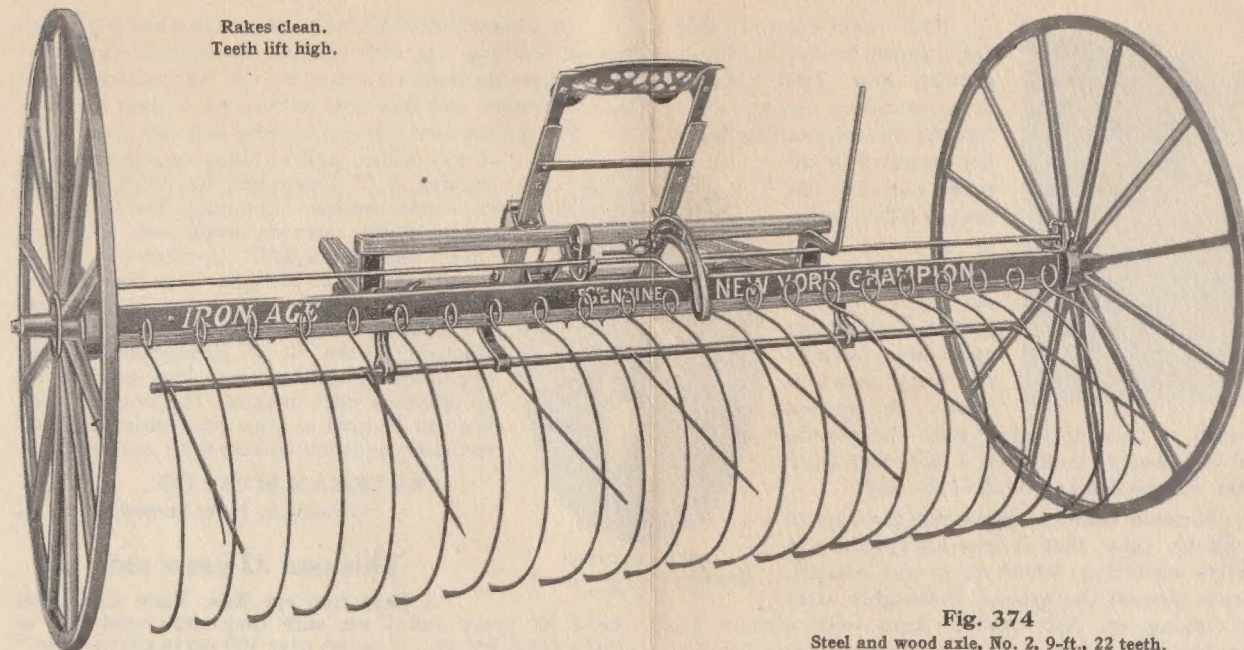

Fig. 374

Steel and wood axle, No. 2, 9-ft., 22 teeth.

The teeth. Oil tempered, flat pointed (sled-runner shape), interchangeable (no rights and lefts). They hang low, lift high when dumping, are not fastened in their holders, but have free action; are not easily damaged.

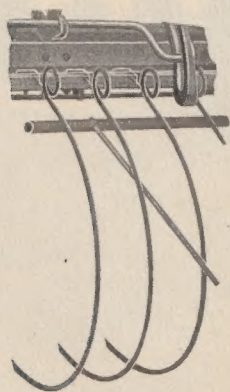

Fig. 342

Interchangeable teeth, flat-pointed, have free action.

Cleaners are steel, diamond shaped, securely bolted to steel pipe. They pack the hay as the teeth fill and keep it from rolling.

Larger windrows and bunching made with cleaner foot lever.

Dumps with one-piece rod from both wheels at once—this makes even draft. Levers, hand and foot, give the driver control at all times.

Wood wheels furnished unless otherwise ordered. They have loose hubs and separate ratchets which are easily replaced when worn.

9 and 10 foot rakes are trussed to prevent sagging in the center.

Combination pole and thills, Fig. 271. For two horses or one. Can be furnished for any "Iron Age" (New York Champion) rake. A practical combination. The solid parts in the cut show

what is necessary to make the thills into combination pole and the dotted lines show the way both are attached. Order new rakes this way by adding letter "C" to the number, as **No. 1820C**, and add \$1.00 to the price.

Patten & Stafford repair parts. We have the original patterns for parts on the principal styles of New York Champion rakes and can furnish parts that will fit.

Dumping and Cleaning Devices Satisfactory

AMOS, W. VA.

The "Iron Age" (New York Champion) Hay Rakes stand up properly, dumping and cleaning devices are entirely satisfactory and the teeth clean the ground as they should without scratching up all the dirt and trash in the field.

J. C. JONES.

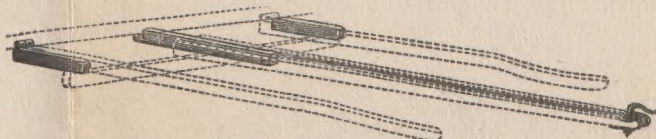

Fig. 271

Solid parts show what is necessary to change thills to combination pole.

IRON AGE (Genuine New York Champion) Wood Hay Rake

That these rakes are standard is shown by the heading—a genuine New York Champion means to many, many thousand farmers an old, familiar friend, the standard of all rakes, one that has never failed them in times of need. "This one thing I do," said Wm. H. Patten, originator and manufacturer for forty years or more—he applied

himself to making the best rake—he was the son of a farmer, worked on a farm and knew what was needed to get all of the hay.

Farmers came to know this machine as a reliable rake; that it was always there in perfect condition, whenever it was wanted; that it cleaned the ground thoroughly without taking up dirt; that it wore well, worked with ease and convenience, in heavy or light crops, on level fields or hillsides.

WM. H. PATTEN
Originator and Manufacturer
for forty years.

They knew Patten & Stafford were onto their job, which meant keeping up with modern conditions—improvements were made as fast as needed, the best materials went into the rakes, and they always lived up to their name.

If a farmer sees a storm coming and has many acres of hay down, and is lucky enough to have a genuine N. Y. Champion, he don't find half the teeth broken, dumping device out of order, wheel ratchets worn, and a general "don't feel well myself" appearance.

The Bateman M'f'g Co. have been making farm and garden machines for 76 years and are certainly competent to continue the manufacture of the N. Y. Champions in their original form and the same high grade. We are the only ones making the original rake. We will be glad to have your order and add one more satisfied customer to our list.

BATEMAN M'F'G CO.,
Grenloch, New Jersey, U. S. A.

This one 32 years old

"I have had my New York Champion Rake 32 years and I am sure they were used two or three years before. I raked over 100 acres every year."

H. C. EARLE, Clinton, N. Y.

Cocking hay in the windrow. The teeth lift high when dumping.
